## Mission

Be the largest Saudi-headquartered manufacturer of essential and specialty pharmaceuticals — anchor of the Vision 2030 pharma localisation strategy.

## Strategic intent

Lift local manufacturing share of Mizan portfolio from 32% to 48% by 2028 — eight points ahead of the Vision 2030 40% national target. Capture the biologics + GLP-1 + cold-chain manufacturing wave. Use specialty mix to grow EBITDA margin from 27.4% to 32.0%.

## Current state, mid-2026

Mizan Pharma Manufacturing ended 2025 with SAR 1.40B of revenue at 27.4% EBITDA margin — the most profitable BU and the anchor of Mizan's Saudi-Made portfolio thesis. 412 SKUs registered with SFDA across 4 GMP-licensed plants. Saudi-Made share of Mizan's own dispensing portfolio is 32% — already ahead of the national peer average but eight points behind our 2028 internal target.

# The KSA pharma manufacturing market

The KSA pharma manufacturing market is sized at **SAR 18B** in 2026 (forecast), growing at **12.5%** for the year and a projected **16.7–14.3%** CAGR through 2028. Manufacturing's 2026 revenue of SAR 1,560M implies a market share of approximately **8.7%**.

|                               | 2024A  | 2025A  | 2026F  | 2027F  | 2028F  |
|-------------------------------|--------|--------|--------|--------|--------|
| Market size (SAR B)           | 14     | 16     | 18     | 21     | 24     |
| Market growth %               | +11.5% | +14.3% | +12.5% | +16.7% | +14.3% |
| Manufacturing revenue (SAR M) | 1,240  | 1,400  | 1,560  | 1,770  | 2,010  |
| Manufacturing share           | 8.86%  | 8.75%  | 8.67%  | 8.43%  | 8.38%  |

## Demand drivers

Vision 2030 pharma localisation target 40% local manufacturing by 2030 (current ~32%). Saudi Made certification. NUPCO preferential procurement. GLP-1 + biosimilar demand. SFDA registration pipeline expanding.

## Regulatory environment

Saudi Food & Drug Authority (SFDA) — GMP licensing, drug registration. Ministry of Industry & Mineral Resources — Saudi Made framework. NUPCO — unified procurement.

## Vision 2030 programme linkages

Health Sector Transformation Program · Saudi Made · National Industrial Strategy · National Biotechnology Strategy · Drug Security Strategy.

# How we compete in Manufacturing

Our 2028 ambition is not to be the largest by revenue but to be the most integrated by capability and the most disciplined by margin. The competitive set is anchored by a handful of named operators below.

| Competitor                             | 2025 Rev (SAR M) | 2025 EBITDA % | Strategic posture                                                                                                                                                                                                                                                         |
|----------------------------------------|------------------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Julphar (UAE)                          | 2,120            | 24.0%         | UAE; regional generics scale; insulin capability.                                                                                                                                                                                                                         |
| <b>Mizan Pharma Manufacturing (us)</b> | 1,400            | 27.4%         | <b>Lift local manufacturing share of Mizan portfolio from 32% to 48% by 2028 — eight points ahead of the Vision 2030 40% national target. Capture the biologics + GLP-1 + cold-chain manufacturing wave. Use specialty mix to grow EBITDA margin from 27.4% to 32.0%.</b> |

## Biggest competitive threat to manage

API supply concentration on India + China (74% of our top-50 APIs). Trade-flow disruption or FX shocks compress margin within 60-90 days. Dual-sourcing programme is the structural answer.

## Biggest competitive opportunity to capture

GLP-1 + biologics fill-finish. The biosimilar partnership signed March 2026 plus our cold-chain spine plus the Sudair Line 8 commissioning Q4-2026 position Mizan as the first Saudi end-to-end GLP-1 platform — a category growing 38% YoY in KSA on weight-loss demand.

# Revenue, EBITDA, cash and operating KPIs — 2026-2028.

## Financial trajectory

|                 | 2024A | 2025A  | 2026F  | 2027F  | 2028F  |
|-----------------|-------|--------|--------|--------|--------|
| Revenue (SAR M) | 1,240 | 1,400  | 1,560  | 1,770  | 2,010  |
| YoY growth      | —     | +12.9% | +11.4% | +13.5% | +13.6% |
| EBITDA margin % | 26.8% | 27.4%  | 28.5%  | 30.1%  | 32.0%  |
| EBITDA (SAR M)  | 332   | 383    | 444    | 532    | 643    |

## 2026 operating KPIs (Manufacturing-specific)

| Metric                             | Value 2026               |
|------------------------------------|--------------------------|
| SKUs registered with SFDA          | 412                      |
| Plants (SFDA GMP-certified)        | 4                        |
| Sterile injectable lines           | 7                        |
| OEE (overall equip. effectiveness) | 78%                      |
| Saudisation (production)           | 61%                      |
| Local mfg share of Mizan portfolio | 38% (target 48% by 2028) |

# The four to six things we will do that matter.

The plan is operationalised through the discrete initiatives below. Each has a named owner (the BU CEO) and a quarterly milestone reported through the StrategyOS Monday Brief.

1. Sterile-injectable Line 8 commissioning — Sudair plant, +85M units/yr, Q4-2026
2. GLP-1 fill-finish capability — biosimilar manufacturing partnership signed Mar-2026
3. Oncology cytotoxic dedicated line — Jeddah plant, Q2-2027 commissioning
4. Saudi Made pharma listing — 24 new SFDA-Saudi-Made certifications by 2028
5. Sustainability — solar PV retrofit across all 4 plants, on-track Q3-2027

## Vision 2030 programme alignment

Health Sector Transformation Program · Saudi Made · National Industrial Strategy · National Biotechnology Strategy

## 06 · BU-LEVEL RISKS

# What could break the plan.

## R-01 — Active Pharmaceutical Ingredient (API) supply concentration **Impact: H · Likelihood: M**

~74% of Mizan's API supply is sourced from India and China. Trade-flow disruption, FX shocks, or regulatory action would compress manufacturing margin within 60-90 days.

*Mitigation: Dual-source qualification programme (target 100% of top-50 APIs dual-sourced by 2028); 90-day strategic safety stock on essential APIs; Lifera partnership for local biosimilar capacity.*

## 07 · CAPITAL ASK 2026-2028

# Investment to deliver the plan.

**Cumulative capital ask 2026-2028: SAR 420M.** Funded from a combination of BU-generated cashflow, group capital recycling, and the SAR 2.65B group envelope. Note: *Sudair Line 8 (Q4-2026), Jeddah oncology line (Q2-2027), GLP-1 fill-finish capability, GMP upgrades.*

## Governance

BU CEO is the named owner of every initiative and every number in this plan. Monthly performance is reviewed at the Executive Committee. Quarterly progress is reported to the Board. The Monday Brief surfaces variance vs plan in real time.

**BU sponsor:** Dr. Reem Al-Harbi, CEO Mizan Pharma Manufacturing.

**Group oversight:** Khalid Al-Rashed, Group CEO.

**Plan effective from:** 12 January 2026 (Board-approved).
